

30% of Your Revenue Walks Out Your Door Every Year

Each week, physicians nationwide see hundreds of thousands of patients. Some are treated in one visit. Others need additional appointments or are referred for additional procedures. Of those referrals, 30% of patients either do not schedule their physician's referred procedures or they go to a competing health system to get the same care. Either way, for a hospital system, that is millions of dollars annually that just walked out the door.

Enter Abax Health. To bring those patients back into the health system, financial leadership teams need to proactively engage with the patient. Abax supports this engagement by:

1. Helping the patient understand the care recommended by the physician and why they need it;
2. Conducting all necessary scheduling and financial counseling services on behalf of the patient;
3. Ensuring that the patient understands all the steps in the process;
4. Scheduling them for the procedure.

The fact that over \$37M of revenue “walks out the health systems door” on an annual basis is tragic and needs to be solved.

Abax Health understands that life is busy and that we often neglect to manage our own health. We have made it our mission to change that and ensure that every person receives the care they need, when they need it.

Using our advanced data mining and machine learning algorithms, Abax identifies when a physician has referred a patient for care but the patient has not received that care. With the patient’s clinical data in hand, our Education and Outreach Coordinators connect with the patient, educate them on the care they need, and schedule that care in the most convenient manner possible. The results is a WIN-WIN-WIN for the patients, the health system and the physician.
